Lokoja, Nigeria

Software Developer

Software developer focused on building practical web and mobile products with clean interfaces, useful backend systems and real-world business workflows. Currently studying Mathematics at Federal University Lokoja while building products across education, logistics, ministry and business operations.

EXPERIENCE

Full Stack Developer - Unique College of Health Science and Technology
May 2026 - Present
Building a school management and public web platform for institutional operations, student records and digital visibility.
- Developed responsive React interfaces for school-facing pages and administrative workflows.
- Worked on authentication, role-aware access patterns and structured data flows for school operations.
- Built with React, Node.js, Express, PostgreSQL, Prisma, JWT and RBAC concepts.

Mobile App Developer - EFATA App
2026 - Present
Developing a Flutter logistics application for truck, tipper, tanker and goods movement workflows.
- Designed mobile-first logistics flows for service requests and transport coordination.
- Worked with Flutter and Dart to shape a practical cross-platform application experience.
- Structured the app direction around usability, transport categories and operational clarity.

Frontend Developer - EFATA Website
2026
Built the public EFATA Logistics website with React.js to present services and create contact pathways for customers.
- Created responsive service pages for logistics categories and company information.
- Focused on clear layout, trust-building content and simple conversion paths.
- Built with React.js, Vite, responsive CSS and deployment-ready frontend practices.

Full Stack Developer - Spirit Life Ekklesia Network
2026 - Present
Working on digital products for ministry communication, member engagement and content management.
- Built reusable frontend components for public-facing ministry pages and content sections.
- Worked on dashboard and content-management ideas for sermons, events, programs and updates.
- Applied React, Laravel, Flutter, API design and admin workflow thinking across the ecosystem.

Software Developer - StarTrack
2026 - Present
Developing a business management application for inventory tracking, seller monitoring, sales, returns and reports.
- Designed product flows for inventory, seller activity, reports and return management.
- Planned offline-aware business workflows for teams that need reliable day-to-day visibility.
- Built around Flutter, Dart, structured data and practical reporting requirements.

TECHNICAL SKILLS

Skills	Technologies
Frontend	React, Next.js, JavaScript, TypeScript, Vite, HTML, CSS, Tailwind CSS, Sass, Responsive UI
Mobile	Flutter, Dart, Cross-platform apps, Mobile UI, Offline-aware workflows
Backend	Node.js, Express, NestJS, Laravel, REST APIs, Authentication, JWT, RBAC
Data	PostgreSQL, Prisma, SQLite, Data modeling, Reports
Tools	Git, GitHub, Vercel, Render, Firebase, Appwrite, Deployment workflows
Product	UI/UX implementation, Admin dashboards, School systems, Logistics systems, Business tools, AI-assisted development

SELECTED PROJECTS

- Unique College school management platform
- EFATA Flutter logistics app
- EFATA React.js website
- Spirit Life Ekklesia Network web and app ecosystem
- StarTrack inventory and business management app

EDUCATION

BSc Mathematics - Federal University Lokoja (2024 - Present)
Software Engineering Program - ALX Software Engineering (2023 - Present)
